IV. NONCOMMUNITY WATER SYSTEM INVENTORY INFORMATION

NONCOMMUNITY WATER SYSTEM INVENTORY INFORMATION

INTRODUCTION

The noncommunity water system inventory information section contains data on noncommunity public water systems regulated by the Missouri Department of Natural Resources' Water Protection Program, Public Drinking Water Branch. There are two types of noncommunity public water systems. One type of noncommunity public water system is a transient noncommunity public water system. This is a public water system that is not a community water system, which has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least sixty days out of the year (Missouri Safe Drinking Water Regulations 10 CSR 60-2.015). This means that for the most part, the population changes daily. These systems include, but are not limited to, recreational areas, restaurants, highway rest areas, hotel/motels, campgrounds, etc. The second type of noncommunity public water system is a nontransient noncommunity public water system. This is a public water system that is not a community water system and that regularly serves at least 25 of the same persons over six months per year (Missouri Safe Drinking Water Regulations 10 CSR 60-2.015). This means that for the most part, the same population returns daily to the facility. These systems include, but are not limited to, factories, large businesses and industries, schools, etc.

Noncommunity water system inventory information contains a complete listing of active noncommunity water systems. This list contains the system name, county of location, system identification number, system type and season begin and end dates. The noncommunity listing is first by county and then alphabetical within the county.

Noncommunity Water Systems
